

Assignment -10

WALLET DESIGN

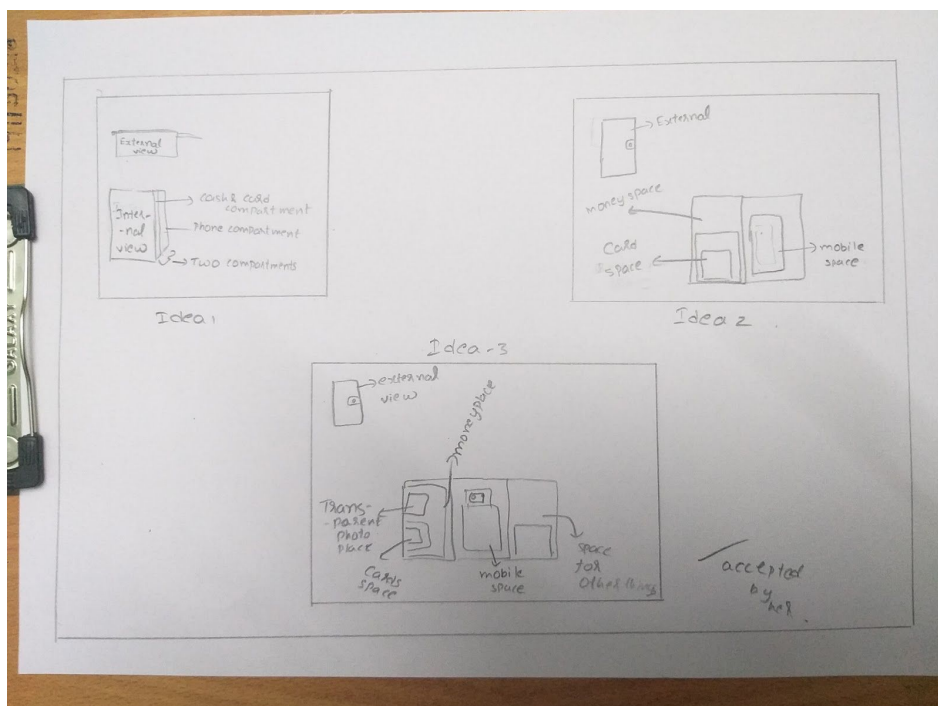

2. Design Thinking Process that I have used to design a wallet:

As mentioned in the instructions we formed a two people team. I have given my wallet requirements to my partner and she gave me her requirements. Her requirements are as follows

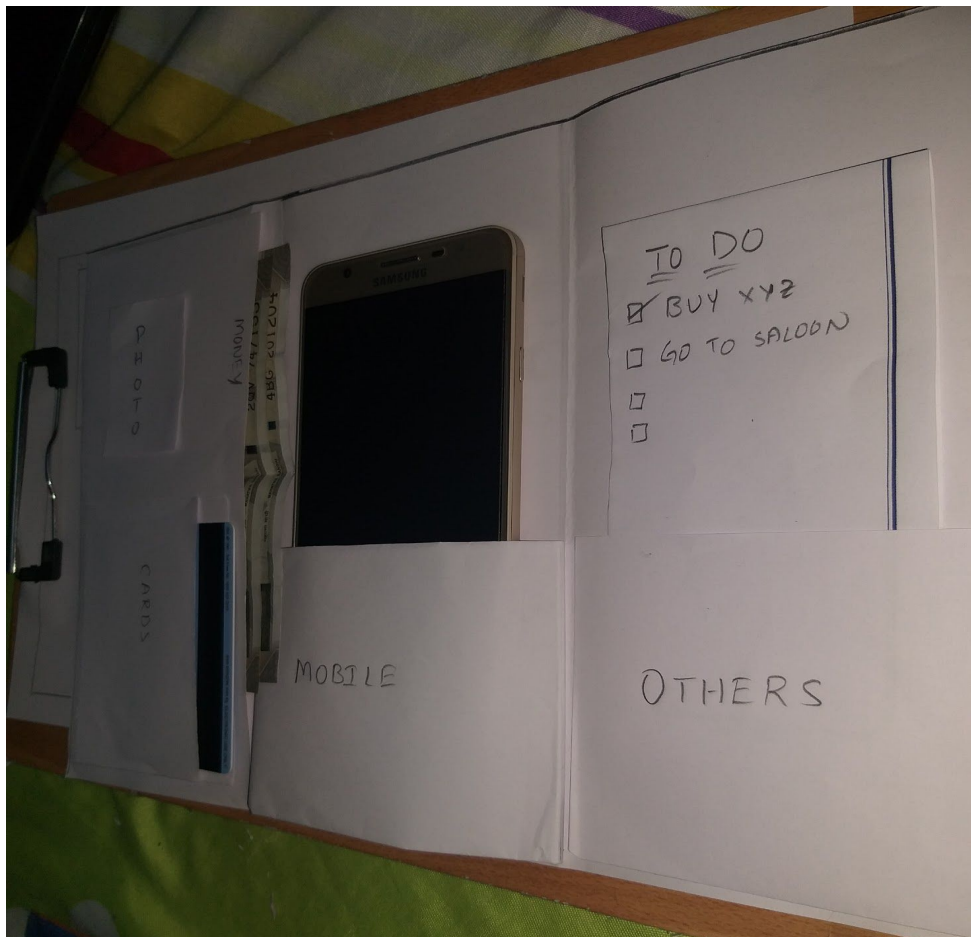

1. She need space in wallet to hold her mobile in it.
2. She need individual portions to place money and cards.
3. She needed it in small sized so, that she could carry it in hands.

By knowing her requirements i have applied the design thinking process as follows

- Understood her requirements clearly.
- I have created a few designs for those specifications as follows

- After taking her suggestions I have undergone few minutes of brainstorming and finally selected the third design in the figure.
- Later I have developed a prototype to the design using paper.
- While developing prototype I have improvised it a little by adding transparent place to fix photo.
- After developing a prototype I have shown it to her as part of testing
- She tested it by placing her essentials in it.
- She accepted the design and
- Finally the outcome is as follows:

In this way I have applied the design thinking process to design a wallet.
