

# **Assignment - 12**

## **Identify Grand Challenge Projects in your Neighbourhood or Region**

After reading about all the 14 Grand challenges in <http://www.engineeringchallenges.org/> site I have got an overview on grand challenges and which are to be called as grand Challenges. Finally I have Identified the challenging issue which can be considered as grand challenge

### **Improving Essential skills along with Academics in students of my locality**

Many studies have proven that there are huge number of employment opportunities but there's a shortage of skilled people to get the opportunities.

#### ***WHY I HAVE SELECTED THIS AS PROBLEM?***

I have observed this problem from classroom level many of my friends are very good technically but when their is any activity such as presentation or demo what they did they often fail to present. I have also noticed this in the case of many students.

#### ***WHY IT IS CHALLENGING?***

The root problem I have identified is that it is not their fault or problem and this because they aren't aware of such skills and they are not getting sufficient practise for this we cannot blame the education system completely because the academics are equally Important.

#### ***HOW CAN IT BE SOLVED?***

This the actual challenge here there should be few modifications in present education system which allows students to improve their skills with the academics and it should be widely accepted.

For the better understanding of problem I have explained the term SKILL with presentation Skills however it refers to the other essential skills.
